

I AM A STRIVING WEB DEVELOPER, TECHNOLOGY ENTHUSIAST, HUSBAND, NATURE LOVER, AND AVID GAMER. I’VE RECENTLY TRANSITIONED FROM LIVE, LARGE SCALE AUDIO, LIGHTING, AND STAGE PRODUCTION, TO PURSUE CODING AND WEB DEVELOPMENT. THE BLEND OF PROBLEM SOLVING AND CREATIVITY REQUIRED TO BUILD ANY NEW APPLICATION IS GREATLY CHALLENGING AND REWARDING. I ENJOY BOTH FRONT END AND BACK END DESIGN AS BOTH BRING THEIR OWN UNIQUE HURDLES AND OPPORTUNITIES.

Just A Little Bit About Me

Technology has always been my passion, and it is my firm belief that its purpose is to enhance our lives in the modern age. I started volunteering with my church’s tech team when I was 12 years old, learning little by little about using audio and video equipment. I immediately loved having the ability to be creative using technology. Eventually I became production director at that same church, overseeing the live production of all weekend services. In college, I studied business management, but recently decided that I would like to pursue web and App. development. I attended Coding Dojo in Seattle where I was able to solidify my coding foundation. They teach students how to build responsive front end designs using HTML5, CSS3, and jQuery as well as how to build fast, functional, efficient back ends using PHP, Node.js, and Ruby. We also became familiar with multiple MVC frameworks such as Codeigniter, Express.js, and Rails. I will always enjoy learning new technologies, languages, and frameworks and look forward to continuing to advance my skill set in the future.

Skills / Technical Experience
